

WHY GET CAVITY WALL INSULATION?

CAVITY WALL FACTS

13.5 Million Homes had cavity wall insulation installed leaving 5.4 million homes without.

Cavity Wall Insulation Lifespan.

25 YEARS

At the end of December 2017 there were 28.1 million homes in the UK.

- 19.6 million have cavity walls.
- 8.5 million have solid walls.
- 24.3 million have a loft space.

SINCE 1970'S

The installation of cavity wall insulation began back in the 1970s. Therefore homes with an early installation may need cavity wall extraction and re-insulating.

ECONOMIC IMPACT

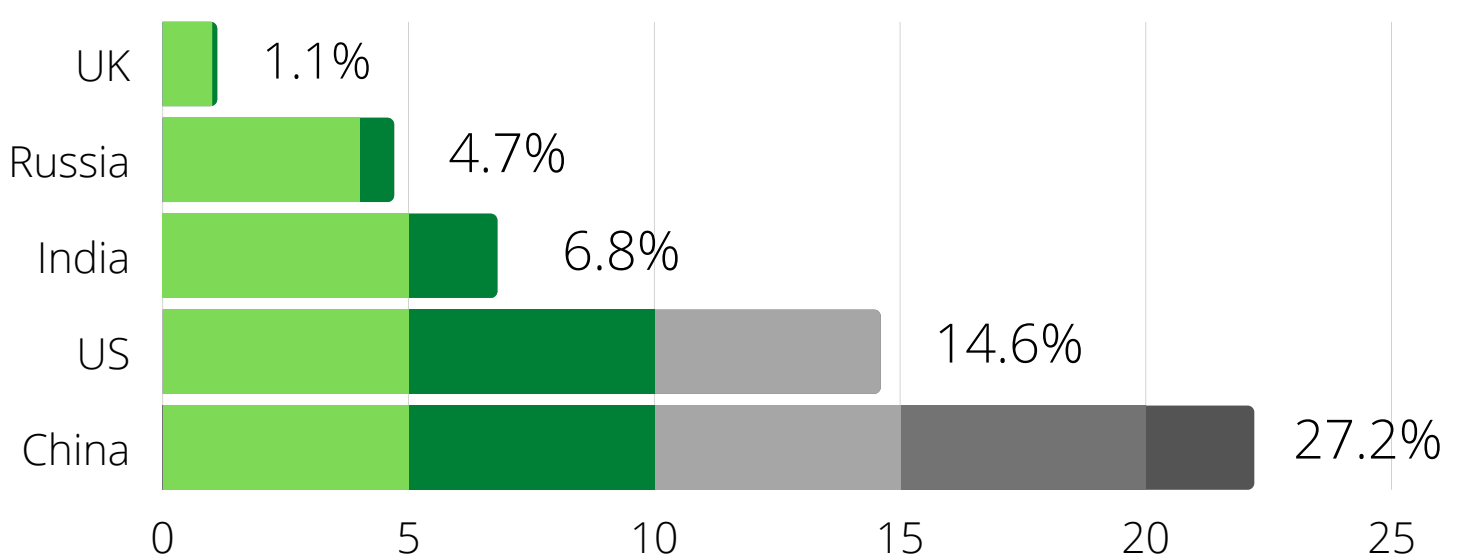

Around one-third of all heat loss in a home is lost through the walls. Installation of cavity wall insulation reduces your homes carbon footprint and makes it easier to regulate temperature. If we all have more efficient homes the UK's carbon usage would drop considerably.

£££ SAVINGS ON ENERGY BILLS

Having cavity wall insulation installed can save you up to £160 a year in heating bills. Over 25 years that's up to £4,000 in savings for the homeowner. According to the energy saving trust website cavity wall insulation could pay for itself within 5 years. **Even Better** - In 2021 you may qualify for a **FREE** cavity wall insulation government grant under the ECO Scheme.
